

# Global Laser Solution: SL7.1

David E. Smith  
Ronald Kolenkiewicz  
**NASA/GSFC**

Peter J. Dunn  
Mark H. Torrence  
Erricos E. Pavlis  
John W. Robbins  
Ronald G. Williamson  
Steve M. Klosko  
Lloyd Carpenter  
**EG&G/WASC Inc.**

Susan K. Fricke  
**RMS Inc.**

Presented at  
The NASA Crustal Dynamics Meeting  
October 21-23, 1987  
Goddard Space Flight Center

## IMPROVEMENTS TO CURRENT SOLUTION

### FORCE MODEL

- GRAVITY: GEM-T1
- EARTH & OCEAN TIDES: GEM-T1
- SOLAR RADIATION PRESSURE: ECLIPSE BY MOON

### ANALYSIS TECHNIQUES

- ALONG TRACK ACCELERATION EVERY 15 DAYS
- SOLAR RADIATION COEFFICIENT EVERY 15 DAYS
- RANGE ERROR MODEL ESTIMATION CAPABILITY

### DATA REDUCTION

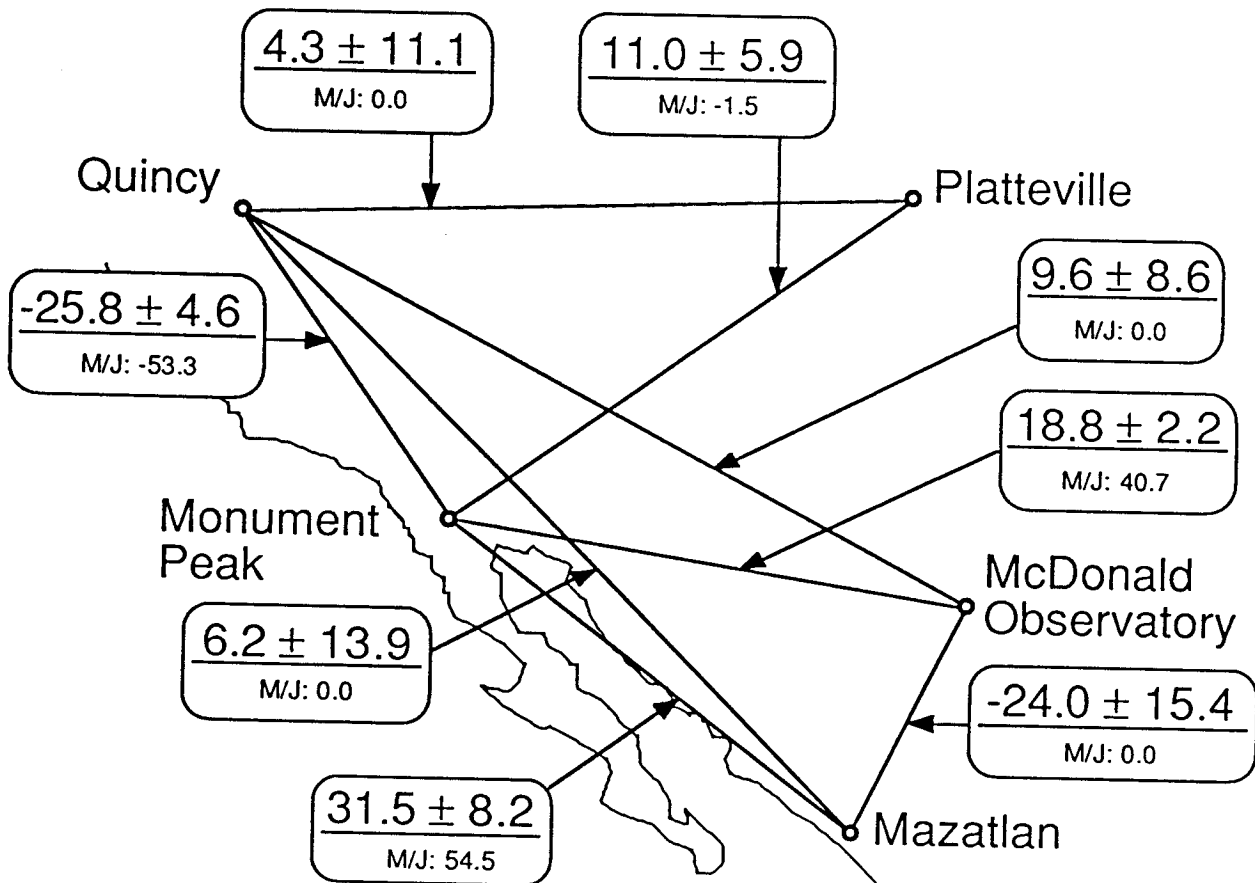

- IMPROVED DATA EDITING BY PASS
- OBSERVATIONS FROM MAY 1976 TO JUNE 1987

### REFERENCE SYSTEM

- MINSTER-JORDAN AM0-2

# SLR Observed Plate Motion Rates for Western North America

(all measurements in mm/yr)

# SLR Observed Vector Motions for Western North America

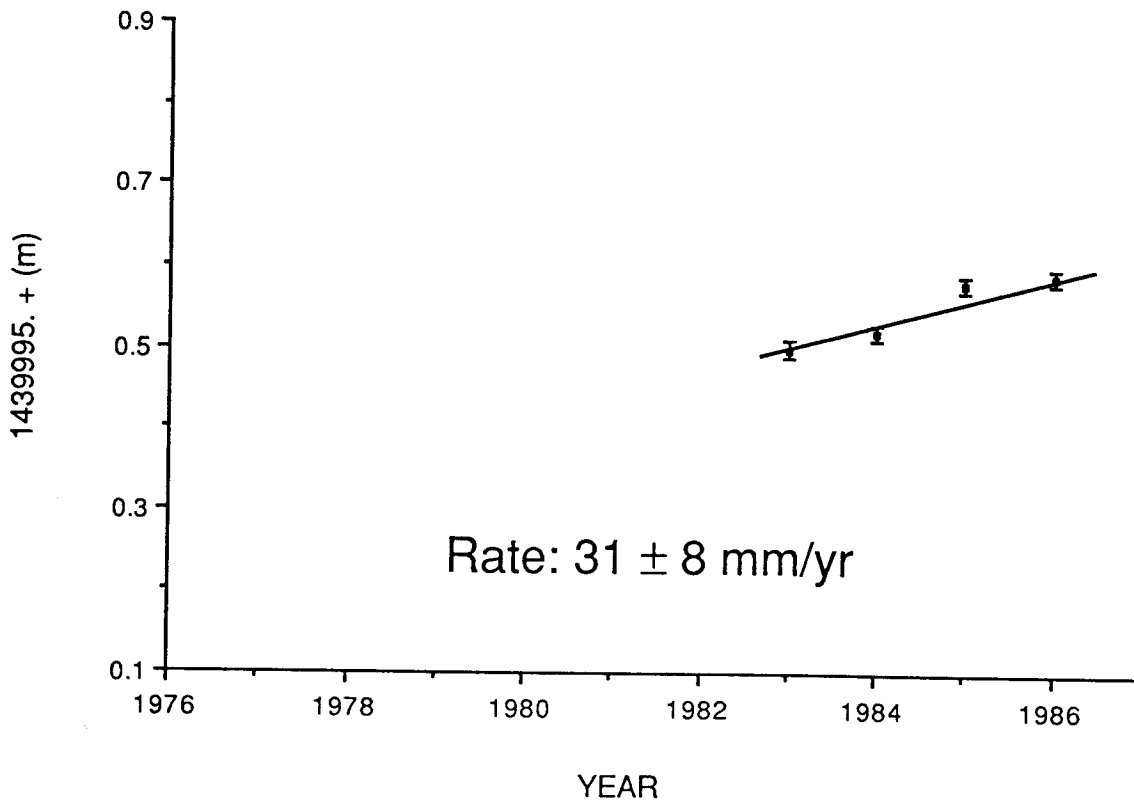

SL7.1 solution with AM0-2 871013

Station	Rate (mm/yr)	Azimuth
Bear Lake	$42 \pm 17$	$218^\circ \pm 23^\circ$
Mazatlan	$12 \pm 4$	$242^\circ \pm 26^\circ$
McDonald Obs.	$29 \pm 6$	$237^\circ \pm 12^\circ$
Monument Pk.	$39 \pm 6$	$284^\circ \pm 7^\circ$
Otay Mtn.	$63 \pm 10$	$297^\circ \pm 7^\circ$
Platteville	$10 \pm 10$	$188^\circ \pm 44^\circ$
Quincy	$24 \pm 7$	$242^\circ \pm 15^\circ$

# SLR Observed Plate Motion Rates for the Pacific Basin

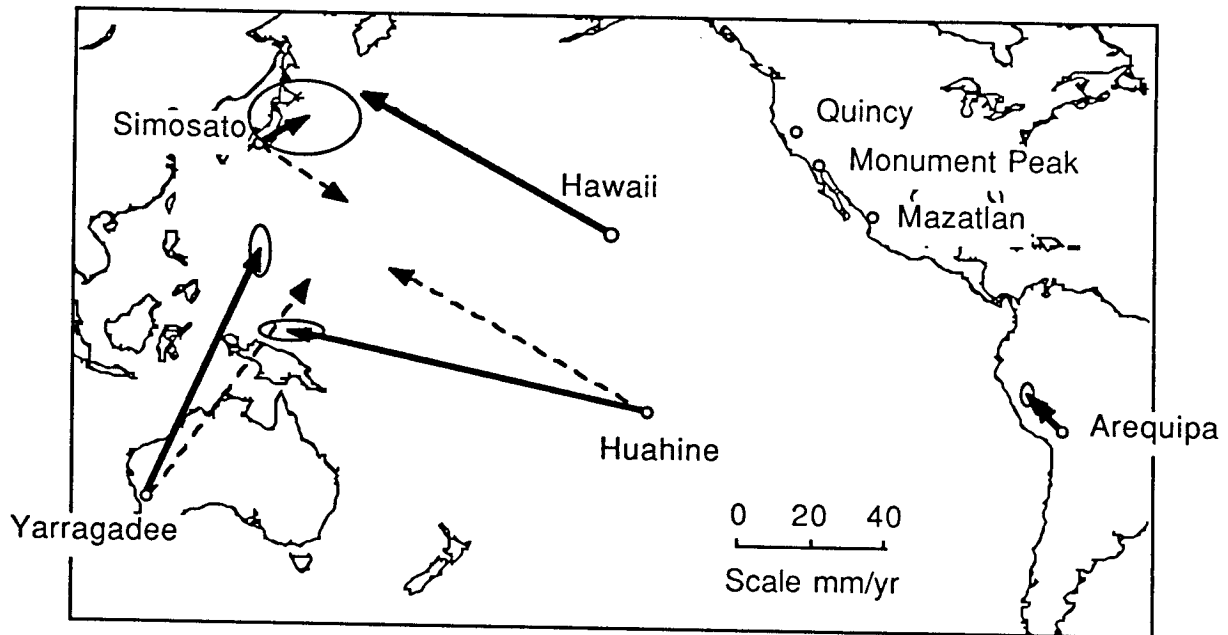

# SLR Observed Plate Motion Rates for the Pacific Basin

(all measurements in mm/yr)

FROM - TO	OBS. RATE	M/J
Quincy - Simosato	$-27.8 \pm 14.1$	-10.9
Quincy - Hawaii	$0.0 \pm 4.7$	8.2
Quincy - Yarragadee	$-85.1 \pm 8.0$	-82.3
Quincy - Huahine	$-0.9 \pm 3.1$	-23.8
Quincy - Arequipa	$7.2 \pm 5.9$	-11.4
Mon. Pk. - Simosato	$-51.8 \pm 17.0$	-64.7
Mon. Pk. - Hawaii	$3.6 \pm 3.2$	0.0
Mon. Pk. - Yarragadee	$-91.0 \pm 7.4$	-102.6
Mon. Pk. - Huahine	$20.7 \pm 4.9$	0.0
Mon. Pk. - Arequipa	$33.1 \pm 2.3$	42.4
Mazatlan - Simosato	$-28.5 \pm 26.0$	-11.6
Mazatlan - Hawaii	$46.6 \pm 13.5$	48.3
Mazatlan - Yarragadee	$-41.7 \pm 8.6$	-57.7
Mazatlan - Huahine	$48.8 \pm 6.3$	14.2
Mazatlan - Arequipa	$-0.8 \pm 9.0$	-11.8
Arequipa - Simosato	$-13.0 \pm 16.8$	-24.9
Arequipa - Hawaii	$79.2 \pm 4.1$	66.0
Arequipa - Yarragadee	$80.0 \pm 8.9$	61.7
Arequipa - Huahine	$119.3 \pm 18.5$	73.7
Huahine - Simosato	$-104.0 \pm 22.1$	-106.8
Huahine - Hawaii	$11.5 \pm 5.5$	0.0
Huahine - Yarragadee	$-83.0 \pm 4.5$	-68.7
Yarragadee - Simosato	$-71.8 \pm 9.1$	-77.4
Yarragadee - Hawaii	$-96.4 \pm 7.4$	-102.8
Simosato - Hawaii	$-87.4 \pm 12.6$	-99.0

# Hawaii - Huahine

## Conclusions

- SL7.1 is providing greater precision in baselines and station vectors (~ 20% over SL6).
- Out of 105 baselines with  $\geq 4$  years of data (1976-86) ~ 45 have an accuracy in rate of change of better than or equal to 10 mm/yr.
- Monument Peak motion is less than the full Pacific Plate motion. The velocity component parallel to the fault is responsible for the deficiency.
- Results from Quincy, Platteville, McDonald Obs. suggest that Basin and Range spreading is being detected.
- Simosato (Japan) appears to be moving N.E. - not consistent with Simosato being on the Pacific or Eurasian Plates (agrees with VLBI results for Kashima).
- Huahine may be showing deformation within the Pacific Plate.
